Sleeman,Peter Edwards,1992 Machine Learning Proceedings 1992   **Convolutional Neural Network in classifying scanned documents** Tai Doan,2016-12-30 Internship Report from the year 2016 in the subject Computer Science Applied University of Science and Technology of Hanoi course Internship language English abstract In this project I created and augmented a dataset from a number of given images to train and test convolutional neural network which is used to classify five classes of images of scanned documents In order to generate the dataset some image processing techniques were applied such as sliding window rotating flipping and pyramid sizing The result of this phase is a set of images having same size 244x224x3 These images after being labeled were divided into three dataset for training validating and testing the network The network is a simple convolution neural network which is also called LeNet It has three convolutional layers and one fully connected layer After being trained and

validated the best state of the network was pointed out and tested on the testing dataset and some real images The result showed that the LeNet was able to classify images of documents in a pretty high accuracy At the end of the project I modified the network and discussed the affect that those changes had on the network with the purpose of creating another similar network which can perform better than the original one The result proved that it worked a little better than its original version **AI Magazine** ,1985 *2002 IEEE International Conference on Data Mining* Vipin Kumar,2002 Consists of 72 full papers and 49 short papers from the December 2002 conference on the design analysis and implementation of data mining theory systems and applications Topics of the full papers include evolutionary time series segmentation for stock data mining cluster merging and splitting *Machine Learning* Ivan Bratko,Sašo Ožeroski,1999 **R Machine Learning by Example** Raghav Bali,Dipanjan Sarkar,2016 Understand the fundamentals of machine learning with R and build your own dynamic algorithms to tackle complicated real world problems successfullyAbout This Book Get to grips with the concepts of machine learning through exciting real world examples Visualize and solve complex problems by using power packed R constructs and its robust packages for machine learning Learn to build your own machine learning system with this example based practical guideWho This Book Is ForIf you are interested in mining useful information from data using state of the art techniques to make data driven decisions this is a go to guide for you No prior experience with data science is required although basic knowledge of R is highly desirable Prior knowledge in machine learning would be helpful but is not necessary What You Will Learn Utilize the power of R to handle data extraction manipulation and exploration techniques Use R to visualize data spread across multiple dimensions and extract useful features Explore the underlying mathematical and logical concepts that drive machine learning algorithms Dive deep into the world of analytics to predict situations correctly Implement R machine learning algorithms from scratch and be amazed to see the algorithms in action Write reusable code and build complete machine learning systems from the ground up Solve interesting real world problems using machine learning and R as the journey unfolds Harness the power of robust and optimized R packages to work on projects that solve real world problems in machine learning and data scienceIn DetailData science and machine learning are some of the top buzzwords in the technical world today From retail stores to Fortune 500 companies everyone is working hard to making machine learning give them data driven insights to grow their business With powerful data manipulation features machine learning packages and an active developer community R empowers users to build sophisticated machine learning systems to solve real world data problems This book takes you on a data driven journey that starts with the very basics of R and machine learning and gradually builds upon the concepts to work on projects that tackle real world problems You ll begin by getting an understanding of the core concepts and definitions required to appreciate machine learning algorithms and concepts Building upon the basics you will then work on three different projects to apply the concepts of machine learning following current trends and cover major algorithms as well as popular R packages in detail These projects have been neatly divided

into six different chapters covering the worlds of e commerce finance and social media which are at the very core of this data driven revolution Each of the projects will help you to understand explore visualize and derive insights depending upon the domain and algorithms Through this book you will learn to apply the concepts of machine learning to deal with data related problems and solve them using the powerful yet simple language R Style and approachThe book is an enticing journey that starts from the very basics to gradually pick up pace as the story unfolds Each concept is first defined in the larger context of things succinctly followed by a detailed explanation of their application Each topic is explained with the help of a project that solves a real real world problem involving hands on work thus giving you a deep insight into the world of machine learning
