*Algorithms Using a Dynamically Typed Programming Language* Jan Wedekind,2012 Current machine vision systems or at  
least their performance critical parts are predominantly implemented using statically typed programming languages such as  
C C or Java Statically typed languages however are unsuitable for development and maintenance of large scale systems When  
choosing a programming language dynamically typed languages are usually not considered due to their lack of support for  
high performance array operations This thesis presents efficient implementations of machine vision algorithms with the  
dynamically typed Ruby programming language The Ruby programming language was used because it has the best support  
for meta programming among the currently popular programming languages Although the Ruby programming language was  
used the approach presented in this thesis could be applied to any programming language which has equal or stronger  
support for meta programming e g Racket former PLT Scheme A Ruby library for performing I O and array operations was  
developed as part of this thesis It is demonstrated how the library facilitates concise implementations of machine vision  
algorithms commonly used in industrial automation I e this thesis is about a different way of implementing machine vision  
systems The work could be applied to prototype and in some cases implement machine vision systems in industrial  
automation and robotics The development of real time machine vision software is facilitated as follows 1 A JIT compiler is  
used to achieve real time performance It is demonstrated that the Ruby syntax is sufficient to integrate the JIT compiler  
transparently 2 Various I O devices are integrated for seamless acquisition display and storage of video and audio data In  
combination these two developments preserve the expressiveness of the Ruby programming language while providing good  
run time performance of the resulting implementation To validate this approach the performance of different operations is
