stuff like how to create and run simple PHP scripts that modify web pages and then build on what you've learned through a series of cohesive and fun exercises that carry over from lesson to lesson. As the chapters progress you begin to build a web site for a growing used car dealership business. This approach keeps the material fun and challenging and gives what you've learned a context to be relevant. A car dealership needs a constantly changing web site because the inventory of cars is always changing. HTML is not the answer for this kind of web site but PHP and MySQL are. Throughout the book you will be working with the web site for the car dealership and adding features and modifying it as the needs of the business and your knowledge grow. This writing style reinforces the previous lessons and keeps you engaged in a real project giving you both a sense of accomplishment and an opportunity to apply what you've learned to a realistic scenario. You are far more likely to retain what you've learned using this approach than just reading dry syntax documentation. The author has an easy and fun style of writing that teaches you PHP in a simple matter of fact manner while showing you the most common uses of the commands you need to get the job done. This keeps your learning pace quick and uncluttered. If you need it he also points you to several resources where you can learn more about the other options a PHP function can offer and even better how to read and understand those resources.
