Building Information Modelling Bim Software:

Implementing Successful Building Information Modeling Erika Epstein, 2012 Building Information Modeling BIM is the process of generating and managing building data during a building's lifecycle. Today more and more architectural firms have adopted BIM software and processes because it allows them to produce measurably more work of better quality in shorter periods of time. Featuring case studies of firms of all sizes, this practical resource shows professionals how to implement BIM in the building industry around the globe. The book explains how BIM allows the data collected to plan, design, and build projects to continue to be used and added to during the occupied life of the building. Readers also become knowledgeable about the changing role of architects within the building industry as they embed BIM in their workflow. From interoperability and open standards, knowledge sharing and gathering, data to the BIM software suite implementation, planning, and project workflow, this authoritative volume provides a thorough understanding of key aspects of BIM that practitioners need to understand. [Building Information Modelling \(BIM\) in Design, Construction and Operations II](#) A. Galiano-Garrigos, L. Mahdjoubi, C.A. Brebbia, 2017-08-09 The papers presented at Building Information Modelling 2017 BIM are from a range of forums including plenary papers, workshops, seminars, and panel sessions. The conference was attended by experts from industry practice and academia, sharing their work on key topics: the development of innovative solutions and the identification of future trends. The volume gives details of how BIM tools and techniques have fundamentally altered the manner in which modern construction teams operate, the processes through which designs are evolved, and the relationships between conceptual detail, construction, and life cycle stages. BIM is essentially value-creating collaboration throughout the entire life cycle of an asset, underpinned by the statistics attached to them, and has far-reaching consequences on both building procurement and infrastructure. BIM 2017 papers cover topics such as BIM in design coordination, Construction operations, Building operation and maintenance, BIM and sustainability, Collaborative working and practices, Facilities management, integration and GIS integration, Automation in construction, Health and safety, BIM and interoperability, Life cycle project management, Cultural heritage, BIM and Robotics, Risk analysis and management, and Emergency analysis, planning, and management.
