Mathematics Education as a Research Domain: A Search for Identity Anna Sierpinska,Jeremy Kilpatrick,2014-02-19 No one disputes how important it is in today s world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives That task is very difficult however Refocusing curricula on fundamental concepts producing new teaching materials and designing teaching units based on mathematicians common sense or on logic

have not resulted in a better understanding of mathematics by more students. The failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals, designs, and productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally, politically, and economically justified institutions, namely schools. Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology, sociology, and mathematics. Psychological theories focus on the individual learner. Theories of sociology of education look at the general laws of curriculum development, the specifics of pedagogic discourse, as opposed to scientific discourse in general, the different possible pedagogic relations between the teacher and the taught, and other general problems in the interface between education and society. Mathematics, aside from its theoretical contents, can be looked at from historical and epistemological points of view, clarifying the genetic development of its concepts, methods, and theories. This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts.

Buddhist-Based Universities in the United States  
Tanya Storch, 2015-05-05. *Buddhist Based Universities in the United States: Searching for a New Model in Higher Education* investigates in depth four American Buddhist universities, namely the Dharma Realm Buddhist University, the University of the West, the Soka University of America, and the Naropa University, all of which offer degrees in liberal arts and professional fields and at the same time educate their students in the philosophy and practices of Buddhism. Buddhist universities in the United States are unique because there are no comparable universities based on the philosophy and practices of other Asian religions also popular in the United States, such as Hinduism, Confucianism, or Sikhism. Even the Jewish community has created only two universities in which professional skills and liberal arts are taught from the position of the moral philosophical principles of Judaism. This book presents the institutional history and academic programs of four Buddhist universities in America and analyzes Buddhist-based pedagogical principles as well as teaching and learning techniques which can be very useful for other colleges and universities in the United States.

*Power, Resistance, and Literacy*  
Julie A. Gorlewski, 2011-03-29. This book explores the impact of high-stakes exams on poor and working-class students and teachers, highlighting their demoralization and alienation. It advocates for critical theory and dialogic pedagogies to resist neoliberal reforms and promote social justice, aiming to empower students and teachers.

M. Vialpando De Groot,1997 *A Qualitative Study of Relationship Building Between Alternative High School Students and Their Teachers* Robert C. Cordell,2011 The purpose of this phenomenological narratological heuristic study is to understand the phenomenon of relationship building between teachers and students at an alternative high school For this study the phenomenon of relationship building is generally defined as the language information ideas and feelings between a teacher and student that affect perception understanding and value between teachers and students Areas explored in this study include understanding how teachers in an alternative high school build positive relationships with students who had previously experienced little success at school and often felt marginalized and understanding how that relationship becomes the tool to allow students to experience success in the classroom Not all students share the experience of a successful high school career of academics and extra curricular activities friendships or the culture of a traditional school setting Over half a million students drop out of school each year U S Department of Education 2008 There are some students who drop out of school due to the lack of experienced success ownership of the school or a non acclimation to the setting Jessor Turbin Costa 1998 Being deficient in course credits and not feeling

connected to a caring adult at the school may lead some students to develop a sense of hopelessness National Research Council 2004 Thus alternative schools fill a void and provide students a valuable option for their high school education Research questions that guided this study include What do students and teachers perceive are characteristics that teachers within an alternative high school setting need to have to promote positive relationships with students How do students and teachers perceive that program elements within an alternative school setting impact the relationship between teachers and students and their connection to school Qualitative research was chosen for the purpose of capturing the lived experiences of the teachers in building relationships with students in an alternative high school Qualitative research was selected because it would serve as the best tool for gathering students and teachers voices lived experiences and individual reflection on the goal of gaining access to human experiences Patton states a phenomenological study is one that focuses on descriptions of what people experience and how it is that they experience what they experience Heuristics is a form of phenomenological inquiry that brings to the fore the personal experience and insights of the researcher Patton 2002 p 107 In the findings of the study students and teachers emphasize that caring adults in a school are the vehicle to defining student success through relationship building The students and teachers identified the various program elements as positively impacting their learning and relationships with teachers The findings in this study centered on teachers building relationships with their students in an alternative high school revealed three overarching themes a adults relating to their students on a human level with interactions that have relevance b adults being advocates for academic and behavior expectations c engagement of students with opportunities provided by the school This research expands the existing research on teacher student relationships positively impacting students learning and success at school
