*Multicriteria Decision-Making Analysis for Civil Engineering Applications* Hossein Bonakdari, Amir Noori, Khosro Morovati, 2024-10-17. Decision making is a key factor to achieve success in any discipline, especially in a field like civil engineering which is based on calculations and requires large amounts of information being taken into account. Most processes and procedures are a compendium of many different tasks and requirements specific to each project under development, and making decisions in such environments can often be an arduous endeavor. That is why the need for analytical criteria capable of assisting with untangling complex scenarios has arisen preponderantly. As an all-encompassing resource, *Multicriteria Decision Making Analysis for Civil Engineering Applications* facilitates civil engineers by outlining state-of-the-art techniques for quantitative decision making to optimally select the appropriate approach when faced with operational issues or to prioritize among multiple options. Authored by recognized experts in the field, this book proves to be a balanced reference volume that is essential not just for civil engineers but also for a wide variety of audiences in interconnected disciplines. Presents a systematic framework of methodological solutions helping readers to make decisions quickly and accurately. Features several real-life case studies that support understanding and provide reliable, actionable guidance. Includes the theoretical underpinnings of decision support tools and emphasizes multicriteria decision analysis techniques applied to civil engineering projects. Offers civil engineers a structured approach to tackle complex decisions and establish priorities in their projects. Is accompanied by an online companion site that includes Excel worksheets demonstrating step-by-step processes, numerical simulations, and worked-out examples.
