

# 4 myths about cybersecurity in Startups

## Myth #1

We are not an interesting target for attackers

## Myth #2

Security requires a lot of money, we just don't have it for now

## Myth #3

If somebody will decide to hack us, they will make it happen anyways

## Myth #4

Since we are a small company, it's not that important if somebody hacks us. It will not affect our business or the damage will be minor

Protect your APIs and Web Applications

## Reality #1

99% of the threats are automated already, and there is an unofficial "market" that allows you to buy access, data, etc

## Reality #2

99% of the security depends on people like engineers who can easily pick this knowledge for free

## Reality #3

It's true only for governments and targets where the cost of attacks is not important. For the rest of businesses, it's about how much they should spend to hack you

## Reality #4

It will be valuable when you become bigger. All the cybersecurity incidents, data breaches, hacks, etc will affect your business even after several years.
