

Model Answer B: IELTS Band 7+

Given are two figure concerning criminality in Britain. The first provides data on the rates of conviction among men and women of various ages, while the second indicates the gender balance of the UK prison population

It is apparent from the information supplied that the rate of conviction among Brits of both sexes increases exponentially during adolescence and peaks at the age of about 20. Also evident is the fact that men are far more likely to offend than women. From a negligible 2 percent among 10-year-old boys, the male conviction rate soars to approximately 16 percent among 20-year-olds. The percentage of female offenders, meanwhile, climbs from 0 percent among girls of 10 to some 5 percent for 20-year-olds. The subsequent decades, however, see dramatic decreases in criminality among both sexes. A mere 2 percent of crimes are committed by 60-year-old men and 0 percent by women of the same age.

As for the proportion of male and female prison inmates, men outnumber women 24 to 1. Some 96 percent of all prisoners are men, while the remainder are female.
