controllers and removing the need for coordination between power controllers The method node and network provide efficient turn up of dense wave division multiplexing DWDM services which is critical to optical layer functionality including optical layer restoration

Next Generation Optical Network Design and Modelling Andrea Bianco, Fabio Neri, 2003-02-28

Optical networks are leaving the labs and becoming a reality Despite the current crisis of the telecom industry our everyday life increasingly depends on communication networks for information exchange medicine education data transfer commerce and many other endeavours High capacity links are required by the large future traffic demand and optical networks remain one of the most promising technologies for meeting these needs WDM systems are today widely deployed thanks to low cost at extreme data rates and high reliability of optical components such as optical amplifiers and fixed tunable filters and transceivers Access and metropolitan area networks are increasingly based on optical technologies to overcome the electronic bottleneck at the network edge Traditional multi layer architectures such as the widely deployed IP ATM SDH protocol stack are increasingly based on WDM transport further efforts are sought to move at the optical layer more of the functionalities available today in higher protocol layers New components and subsystems for very high speed optical networks offer new design opportunities to network operators and designers The trends towards dynamically configurable all optical network infrastructures open up a wide range of new network engineering and design choices which must face issues such as interoperability and unified control and management

All-optical Networking 1999 John M. Senior, Chunming Qiao, Sudhir Dixit, 1999 This work presents a series of papers examining various aspects of architecture control and management issues in all optical networking
