During the last years, the role of titanium and zirconium in organic synthesis has dramatically increased, and nowadays no synthetic chemist can afford to be without a sound knowledge of this fascinating organometal chemistry. This unique book, edited by Ilan Marek, thus summarizes the numerous applications and developments of these two group 4 early transition metal complexes. A plethora of internationally renowned experts and leading scientists in this field cover all the significant aspects of this increasingly important part of organic chemistry and bring the reader up to date. A particularly attractive and useful feature is the inclusion of typical experimental procedures chosen for broad utility and application. This comprehensive demonstration of the diversity and the applications of these important compounds is a must-have for all chemists working in organometallic or synthetic organic chemistry. Management is about people working in organizations, and international management is about people from many cultures working together, competing against one another or trying to cope with one another's differences. Consequently, this textbook is about people from many walks of life, from affluent countries and from struggling regions who are part of a global society. This book is written primarily for business students who have had foundation courses in management, organizational behavior, and economics. The author's objectives for this textbook are simply to provide a human relations approach to managing internationally and to emphasize the differences among peoples of the world that make an international career rewarding.
