Parallel and Distributed Processing and Applications Yi Pan, Daoxu Chen, Minyi Guo, Jiannong Cao, Jack

Dongarra, 2005-10-19 Welcome to the proceedings of ISPA 2005 which was held in the city of Nanjing. Parallel computing has become a mainstream research area in computer science and the ISPA conference has become one of the premier forums for the presentation of new and exciting research on all aspects of parallel computing. We are pleased to present the proceedings for the 3rd International Symposium on Parallel and Distributed Processing and Applications ISPA 2005 which comprises a collection of excellent technical papers and keynote speeches. The papers accepted cover a wide range of exciting topics including architectures, software, networking and applications. The conference continues to grow and this year a record total of 968 manuscripts including workshop submissions were submitted for consideration by the Program Committee or workshops. From the 645 papers submitted to the main conference the Program Committee selected only 90 long papers and 19 short papers in the program. Eight workshops complemented the outstanding paper sessions.

Distributed Information Systems Harry Katzan, 1979 The notion of a distributed information system has surfaced as a technical concern ameliorated by noteworthy successes in communication networks and minicomputer technology. While the implementation of a distributed system may be regarded as a technical problem, the organizational impact may be substantial, affecting day to day operations as well as managerial philosophy. This book addresses basic concepts and an introduction to the topic followed by technical aspects, communications and dispersion and finishes with managerial aspects and data security. This book is intended for students of business management, data processing, computer science and engineering and for professionals in the same areas.

Scientometrics Mari Jibu, Yoshiyuki Osabe, 2018-07-18 Technological change is one of the greatest issues in the modern world. As the world faces societal challenges, e.g. climate change, aging problem and energy security, technology will contribute to new or better solutions for those problems. New technologies take time to develop and mature; moreover, they tend to be born in the gaps of multiple

technology fields therefore early detection of emerging technological concepts across multiple disciplines will be a very important issue Our goal seeks to develop automated methods that aid in the systematic continuous and comprehensive assessment of technological emergence using one of the major foresight exercises scientometrics There is now a huge flood of scientific and technical information especially scientific publications and patent information Using the information patterns of emergence for technological concepts has been discovered and theories of technical emergence have been also developed in several years We have been developing visualization tools in which thousands of technical areas have been interacted with each other and evolved in time Several indicators of technical emergence have been improved by universities international organizations and funding agencies This book intends to provide readers with a comprehensive overview of the current state of the art in scientometrics that focuses on the systematic continuous and comprehensive assessment of technological emergence
