Industry, Trade, and Technology Review, 2000-03

Three-Dimensional Machine Vision Takeo Kanade, 1987-03-31 A robot must perceive the three dimensional world if it is to be effective there Yet recovering 3 D information from projected images is difficult and still remains the subject of basic research Alternatively one can use sensors that can provide three dimensional range information directly The technique of projecting light stripes started to be used in industrial object recognition systems as early as the 1970s and time of flight laser scanning range finders became available for outdoor mobile robot navigation in the mid eighties Once range data are obtained a vision system must still describe the scene in terms of 3 D primitives such as edges surfaces and volumes and recognize objects of interest Today the art of sensing extracting features and recognizing objects by means of three dimensional range data is one of the most exciting research areas in computer vision Three Dimensional Machine Vision is a

collection of papers dealing with three dimensional range data. The authors are pioneering researchers, some are founders and others are bringing new excitement in the field. I have tried to select milestone papers and my goal has been to make this book a reference work for researchers in three dimensional vision. The book is organized into four parts: 3 D Sensors, 3 D Feature Extractions, Object Recognition Algorithms, and Systems and Applications. Part I includes four papers which describe the development of unique capable 3 D range sensors as well as discussions of optical, geometrical, electronic and computational issues. Mundy and Porter describe a sensor system based on structured illumination for inspecting metallic castings. In order to achieve high speed data acquisition it uses multiple light stripes with wavelength multiplexing. Case, Jalkio and Kim also present a multi stripe system and discuss various design issues in range sensing by triangulation. The numerical stereo camera developed by Altschuler, Bae, Altschuler, Djik, Tamburino and Woolford projects space coded grid patterns which are generated by an electro optical programmable spatial light modulator. Kanade and Fuhrman present a proximity sensor using multiple LEDs which are conically arranged. It can measure both distance and orientation of an object's surface.

Craig Hoffman, Ronald Driggers, 2015-09-22. The first edition of the Encyclopedia of Optical and Photonic Engineering provided a valuable reference concerning devices or systems that generate, transmit, measure or detect light and to a lesser degree the basic interaction of light and matter. This Second Edition not only reflects the changes in optical and photonic engineering that have occurred since the first edition was published but also boasts a wealth of new material expanding the encyclopedia's length by 25 percent. Contains extensive updates with significant revisions made throughout the text. Features contributions from engineers and scientists leading the fields of optics and photonics today. With the addition of a second editor the Encyclopedia of Optical and Photonic Engineering Second Edition offers a balanced and up to date look at the fundamentals of a diverse portfolio of technologies and discoveries in areas ranging from x ray optics to photon entanglement and beyond. This edition's release corresponds nicely with the United Nations General Assembly's declaration of 2015 as the International Year of Light working in tandem to raise awareness about light's important role in the modern world. Virginio Cantoni, 2013-06-29. The following are the proceedings of the Third International Workshop on Perception held in Pavia, Italy on September 27-30, 1993, under the auspices of four institutions: the Group of Cybernetic and Biophysics (GNCB) of the National Research Council (CNR), the Italian Association for Artificial Intelligence (AI-IA), the Italian Association of Psychology (AIP) and the Italian Chapter of the International Association for Pattern Recognition (IAPR). The theme of this third workshop was Human and Machine Vision: Analogies and Divergencies. A wide spectrum of topics was covered ranging from neurophysiology to computer architecture to psychology to image understanding etc. For this reason the structure of this workshop was quite different from those of the first two held in Parma.
