Diving Medicine:

The Physician's Guide to Diving Medicine C.B. Carlston, R.A. Mathias, C.W. Shilling, 2012-12-06 This book is designed to be a physician's guide for those interested in diving and hyperbaric environments. It is not a detailed document for the erudite researcher; rather, it is a source of information for the scuba diving physician who is searching for answers put to him by his fellow nonmedical divers. Following the publication of *The Underwater Handbook: A Guide to Physiology and Performance for the Engineer*, there were frequent requests for a companion volume for the physician. This book is designed to fill the void. Production of the book has been supported by the Office of Naval Research and by the Bureau of Medicine and Surgery Research and Development Command under Navy Contract No. N000014-78-C-0604. Our heartfelt thanks go to the many authors without whose contributions the book could not have been produced. These articles are signed by the responsible authors, and the names are also listed alphabetically in these preliminary pages. Every chapter was officially reviewed by at least one expert in the field covered, and these reviewers are also listed on these pages. Our thanks go to them for their valuable assistance. We are grateful to Marthe Beckett Kent for editing Chapter III. Our thanks also go to Mrs. Carolyn Paddon for typing and retyping the manuscripts and to Mrs. Catherine Coppola who so expertly handled the many fiscal affairs.

Diving Medicine for Scuba Divers Carl Edmonds, Bart McKenzie, Robert Thomas, 1992. Diving medicine explained by experts in clear and simple terms and in a very interesting and entertaining manner.

Bove and Davis' Diving Medicine Alfred A. Bove, Jefferson Carroll Davis, 2004. Covers basic diving physiology, the pathophysiology of decompression sickness, maritime toxicology, assessment of fitness for diving, special considerations for female, elderly, and pediatric divers, diving-related problems in people with pre-existing medical conditions such as pulmonary, cardiac, and neurologic disease, and much more, with new chapters on the kinetics of inert gas, marine poisoning and intoxication, and diabetes and diving.

Diving and Subaquatic Medicine Carl Edmonds, Michael Bennett, John Lippmann, Simon Mitchell, 2015-09-11. Considered an essential resource by many in the field, *Diving and Subaquatic Medicine* remains the leading text on diving medicine, written to fulfill the requirements of any general physician wishing to advise their patients appropriately when a diving trip is planned for those accompanying diving expeditions or when a doctor is required to assess.

Scuba Physiological Costantino Balestra, Peter Germonpre, Simon Pridmore, 2019-12-09. If you are a diver, what you learned about topics such as decompression sickness and narcosis in your scuba diving classes is unlikely to have been as complete as you thought. Most of it will have been over-simplified, and some of it will just have been plain wrong, as diver training agency texts have not kept pace with the science. *Scuba Physiological* gives you a chance to catch up. A recent book called *The Science of Diving* was a collation of work done by scientists in the field of decompression research as part of a three-year project called PHYPODE (Physiology of Decompression). The book did not reach the diving public mainly because it was written by scientists for other scientists, and they speak a different language than most of us. Simon Pridmore is not an expert on diving medicine.

but he knows something good when he sees it When Simon read *The Science of Diving* with help from Google he thought it was worthwhile working on it to try to make it more accessible The original authors agreed that this was a good idea and *Scuba Physiological* is the result There have been great advances to make diving safer but despite nearly 170 years of research the fundamental nature of decompression sickness and decompression stress remains unknown and there are still glaring gaps in our knowledge *Scuba Physiological* provides a good summary of what we know as well as a glimpse of where the science is taking us and some invaluable tips to make you a safer diver now Among many other things you will learn 1 Pre dive hydration exposure to heat whole body vibration and oxygen breathing may reduce the risk of DCS 2 Post dive our bodies have most bubbles running around them 30 to 40 minutes AFTER we have surfaced Post dive hydration and certain other post dive behaviours are therefore also essential 3 The effects of nitrogen narcosis continue for a period of time AFTER a dive 4 All dive computers have a known DCS risk rate 5 Exercise during the period up to 120 minutes after surfacing may increase your risk of DCS 6 Never use a weightlifter s breath hold and release technique when pulling yourself into the boat post dive 7 A little dark chocolate before a dive may be a good thing for you What the experts say This book makes it easy to understand the latest discoveries in diving research and our current understanding of what happens to our bodies when we dive JP Imbert Decompression designer and technical diving pioneer There are some lovely thought provoking ideas and questioning of current dogma This book is well worth the read Dr Ian Sibley Calder HSE Approved Medical Examiner of Divers Occupational Health Physician If you ask a lay person what causes DCS they will likely tell you I don t know I think it has something to do with bubbles If you ask a dive instructor they might discuss things like shaking a soda bottle And if you ask a physician you may get an account referring to things like leukocyte adhesion the coagulation of components inside a vein and the endothelium lining Finally you find one of the top people in the world who do hyperbaric research on divers ask them the same question and they will say I don t know I think it has something to do with bubbles The bottom line is that we don t necessarily know what causes DCS This book is an excellent discussion of what the third person you asked in the above scenario might say It is an enjoyable simplified read of a complex subject and easy for a non scientist to comprehend I consider this an essential text for every diver s shelf Joseph Dituri PhD c CDR US Navy Saturation Diving *Epidemiology of Injury in Adventure and Extreme Sports* D.J., Caine,T.W., Heggie,2013-07-01 This book reviews the existing data on the frequency and distribution of injuries and the factors contributing to injuries in adventure and extreme sports Further it suggests injury prevention strategies and provides recommendations for future research Providing the first comprehensive compilation of epidemiological data over a range of new age sports considered to be adventurous and extreme this publication is also the first of its kind to track down all of the major literature associated with the topic A uniform and evidence based approach to organizing and interpreting the literature is used in all chapters All of the sport specific chapters are laid out with the same basic headings making it easier for the reader to find common information across chapters Sports

physicians physical therapists recreation managers researchers injury prevention specialists the adventure and extreme sport industry and the adventure and extreme sport participants themselves will find the book useful in identifying problem areas in which appropriate preventive measures can be initiated to reduce the risk and severity of injuries They will also want to use the book as a source for future research related to injuries in adventure and extreme sports **Scuba**
