Drawing And Reinventing Landscape Architectural Design Primer:

Drawing and Reinventing Landscape Diana Balmori, 2014-12-05 How to tackle representation in landscape design Representation is a hot topic in landscape architecture While computerization has been a catalyst for change across many fields in design no other design field has experienced such drastic reinvention as has landscape architecture As the world urbanizes rapidly and our relationship with nature changes it is vitally important that landscape designers adopt innovative forms of representation whether digital analog or hybrid In this book author Diana Balmori explores notions of representation in the discipline at large and across time She takes readers from landscape design's roots in seventeenth century France and eighteenth century England through to modern attempts at representation made by contemporary landscape artists Addresses a central topic in the discipline of landscape architecture Features historic works and those by leading contemporary practitioners such as Bernard Lassus Richard Haag Stig L Andersson Lawrence Halprin and Patricia Johanson Written by a renowned practitioner and educator Features 150 full color images Drawing and Reinventing Landscape AD Primer is an informative investigation of beauty in landscape design offering inspiring creative perspectives for students and professionals

Smart Cities Antoine Picon, 2015-11-30 As cities compete globally the Smart City has been touted as the important new strategic driver for regeneration and growth Smart Cities are employing information and communication technologies in the quest for sustainable economic development and the fostering of new forms of collective life This has made the Smart City an essential focus for engineers architects urban designers urban planners and politicians as well as businesses such as CISCO IBM and Siemens Despite its broad appeal few comprehensive books have been devoted to the subject so far and even fewer have tried to relate it to cultural issues and to assume a truly critical stance by trying to decipher its consequences on urban space and experience This cultural and critical lens is all the more important as the Smart City is as much an ideal permeated by Utopian beliefs as a concrete process of urban transformation This ideal possesses a strong self fulfilling character our cities will become Smart because we want them to This book opens with an examination of the technological reality on which Smart Cities are built

from the chips and sensors that enable us to monitor what happens within the infrastructure to the smartphones that connect individuals. Through these technologies the urban space appears as activated almost sentient. This activation generates two contrasting visions: on the one hand a neo cybernetic ambition to steer the city in the most efficient way and on the other a more bottom up participative approach in which empowered individuals invent new modes of cooperation. A thorough analysis of these two trends reveals them to be complementary. The Smart City of the near future will result from their mutual adjustment. In this process urban space plays a decisive role. Smart Cities are contemporary with a spatial turn of the digital. Based on key technological developments like geo localisation and augmented reality the rising importance of space explains the strategic role of mapping in the evolution of the urban experience. Throughout this exploration of some of the key dimensions of the Smart City this book constantly moves from the technological to the spatial as well as from a critical assessment of existing experiments to speculations on the rise of a new form of collective intelligence. In the future cities will become smarter in a much more literal way than what is often currently assumed.

Touching the City Timothy Makower, 2014-11-24. Scale in cities is relative and absolute. It has the ability to make us feel at home in the world or alien from it, connected or disconnected. Both large and small scale in cities can be beautiful, both are right, neither is wrong. Whilst accepting that prescription is no answer, getting the scale right at an intuitive and sensual level is a fundamental part of the magic of architecture and urban design. *Touching the City* explores how scale is manifested in cities, exploring scale in buildings, in the space between them and in their details. It asks how scale makes a difference. Travelling from Detroit to Chandigarh via New York, London, Paris, Rome and Doha, Tim Makower explores cities with the analytical eye of a designer and with the experiential eye of the urban dweller. Looking at historic cities he asks what is good about them, what can we learn from the old to inform the new. The book zooms in from the macro scale of surfing Google Earth to micro moments such as finding fossils in a weathered wall. It examines the dynamics and movement patterns of cities, the making of streets and skylines, the formation of thresholds and facades, and it also touches on the process of design and the importance of drawing. As the book's title *Touching the City* suggests, it also emphasises the tactile, that the city is indeed something physical, something we can touch and be touched by, alive and ever changing.

Representing Landscapes Nadia Amoroso, 2012-03-12. What do you communicate when you draw an industrial landscape using charcoal, what about a hyper realistic Photoshop collage method? What are the right choices to make? Are there right and wrong choices when it comes to presenting a particular environment in a particular way? The choice of medium for visualising an idea is something that faces all students of landscape architecture and urban design, and each medium and style option that you select will influence how your idea is seen and understood. Responding to demand from her students, Nadia Amoroso has compiled successful and eye catching drawings using various drawing styles and techniques to create this book of drawing techniques for landscape architects to follow, and more importantly to be inspired by. More than twenty respected institutions have helped to bring together the very

best of visual representation of ideas the most powerful expressive and successful images Professors from these institutions provide critical and descriptive commentaries explaining the impact of using different media to represent the same landscape This book is recommended for landscape architecture and urban design students from first year to thesis and is specifically useful in visual communications and graphic courses and design studios Joyce in the Belly of the Big Truck; Workbook Joyce A.
